

## Cogeneration Modes: Type 3

## Equations ruling Variable Range Congeneration in Hypatia

- $$prod_{EE} = \eta_{el}^{100\%} \cdot prod_{CHP} - \xi \cdot prod_{th}$$

- $prod_{th} \leq \gamma \cdot prod_{CHP}$  =  $prod_{th|P_{rated}}$

- $prod_{th} \leq prod_{EE}$

# How to insert parameters to make CHP cluster work

e.g. RES with variable range CHP techs
